

Análisis de usuarios

Consistencia

Sirve para que las personas puedan reconocer y utilizar lo que han aprendido, en nuevos contextos, aprender cosas nuevas rápido y poder concentrarse en aspectos relevantes de una tarea.

Tráfico

Objetivo principal:
Estimar la frecuencia de uso de cada necesidad
con el fin de tener información relevante para la
arquitectura de la información

Cada persona tiene un ‘peso’ distinto, por lo
que sus necesidades también

Needs

Main feature

Fish log

Ability to keep record of the fish logs during a session. [Raises/Bites/Releases/Harvest]

Tournament
creator

Ability to create a tournament and invite friends to participate

Profile

Ability to save general information such as personal information and experience information

Team creator

Captain: Ability to create teams, choosing anglers and mates.
Anglers: Ability to ask to be on a team

Boat Profile

Captain:Ability to save information about the boat

80/20 rule

Captain

70%

 Fish log **60%**

 Team creator **10%**

 Tournament creator **20%**

 Profile **5%**

 Boat Profile **5%**

 Fish log **70%**

 Team creator **5%**

 Tournament creator **20%**

 Profile **5%**

 Boat Profile **0%**

Angler

30%

$$70 \times 0.6 = 42$$

$$70 \times 0.1 = 7$$

$$70 \times 0.2 = 14$$

$$70 \times 0.05 = 3.5$$

$$70 \times 0.05 = 3.5$$

$$30 \times 0.7 = 21$$

$$30 \times 0.05 = 1.5$$

$$30 \times 0.2 = 6$$

$$30 \times 0.05 = 1.5$$

$$30 \times 0 = 0$$

 $42 + 21 = 63$

 $7 + 1.5 = 8.5$

 $14 + 6 = 20$

 $3.5 + 1.5 = 5$

 $3.5 + 0 = 3.5$

Considering the features include in each of the followings sections:

- Fish log
- Tournament creator
- Team creator
- Profile
- Boat profile

The estimate is supported by the Pareto Principle, which says that approximately 80% of the effects are generated by 20% of the variables.

According to the interviews and with the observation of the users, the **fish log** and the **tournament creator** will generate most of the traffic on the mobile application, this means that the users will interact most of the time with these two sections.

Regarding the user experience and the user interface design, the traffic estimate is important because it determines where and how the sections are showed on the mobile application. It is essential to consider the usability, and the accessibility, how easy is to reach those parts, so it is possible to promote the traffic that will support the designed experience.
